

Operating Instructions & Maintenance

Metal Surfaces

Routine Cleaning

Water can cause the chromium plated and powder coated steel to rust. Dust regularly with a dry, soft, lint-free cloth.

Thorough Cleaning

Where a more thorough clean is required, lightly dampen with warm water and washing up liquid.

Alternatively, using the same cloth, moisten with methylated spirits for any chromium plated surfaces.

Powder coated surfaces should only be cleaned using mild soap and very warm water. We recommend scum free, emulsifier soaps.

Should you need additional information related to best cleaning products to use please contact the manufacturer directly.
